2016

Damage Assessment  
& Environmental  
Impact Statement

2021

Louisiana Trustees made a  
tool to track recovery and  
guide MAM funding

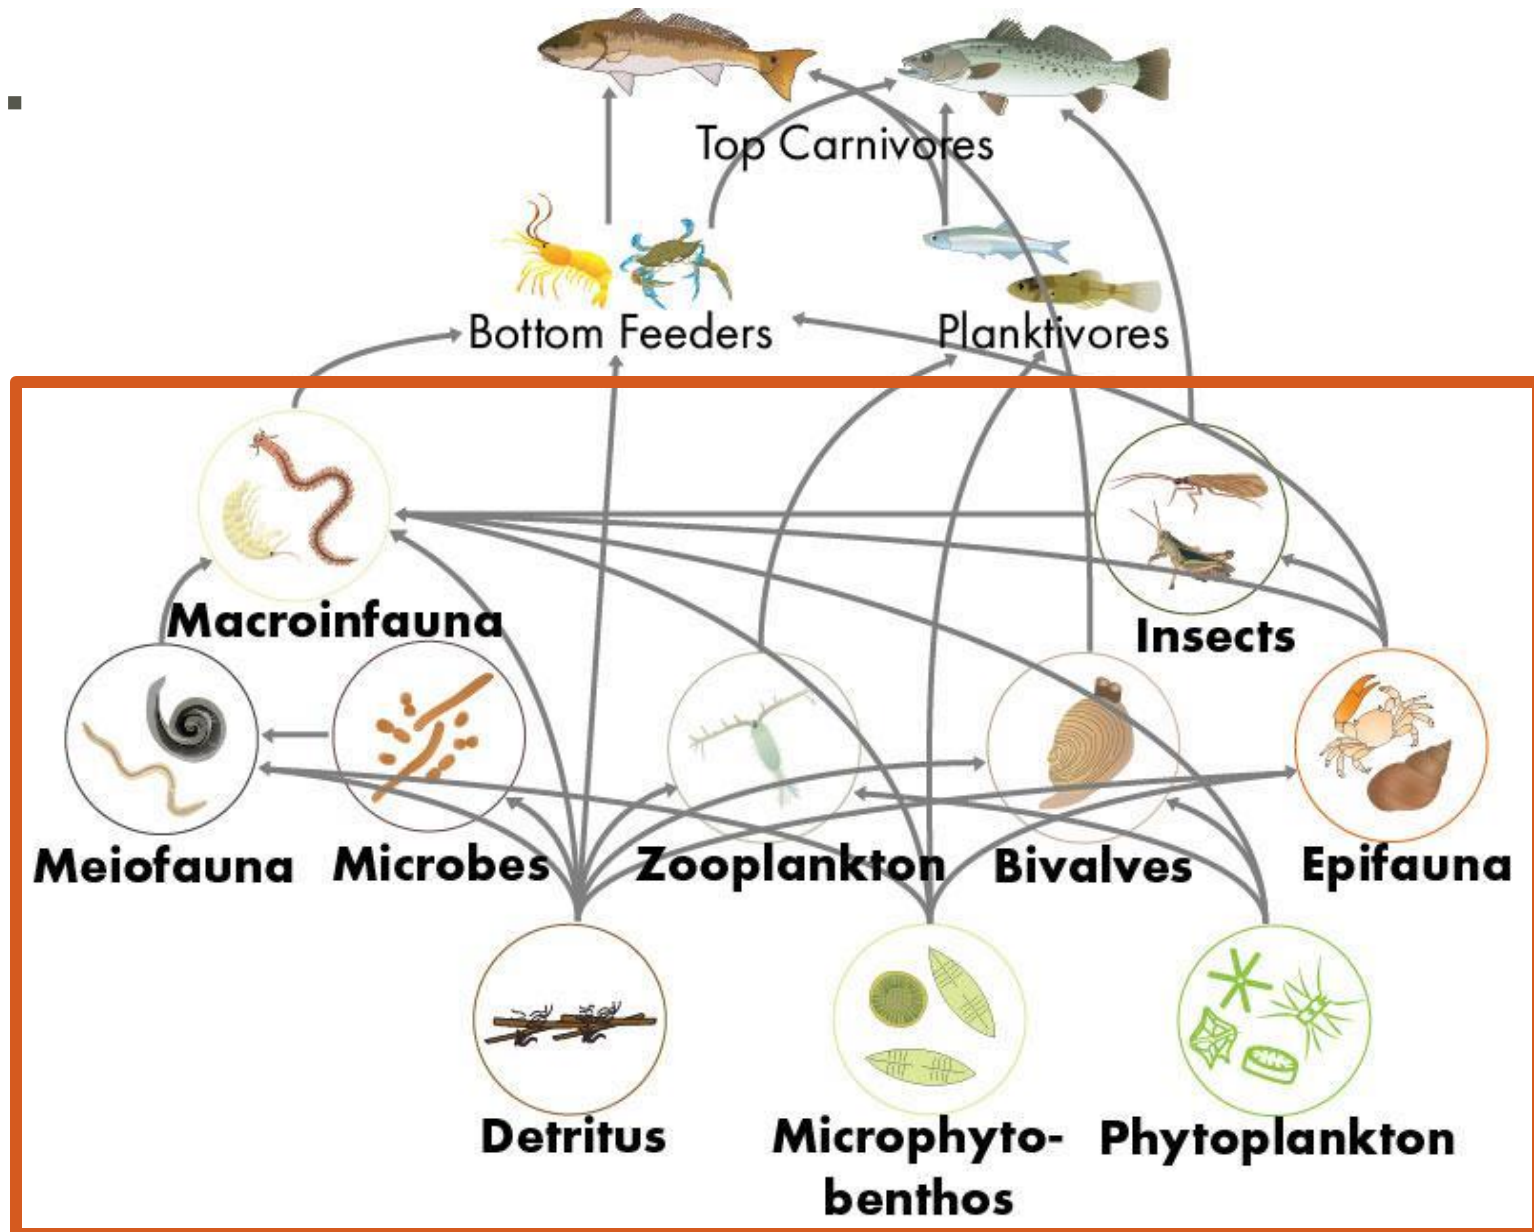

# How we got here..

One possible way to inform and evaluate programmatic restoration is to look at the **base of the food chain:**

## Lower Trophic Levels

Understanding these organisms can inform:

- Estuarine function & health
- Habitat and ecosystem recovery
- Progress towards NRDA restoration goals

Kiskaddon et al., *in review*

# How we got here...

2021-2022

Louisiana Trustees funded a project to evaluate existing lower trophic level data and to develop a plan to collect new data that fills knowledge gaps

## DEVELOPING A PLAN TO ASSESS LOWER TROPHIC LEVELS OF THE BARATARIA ESTUARY

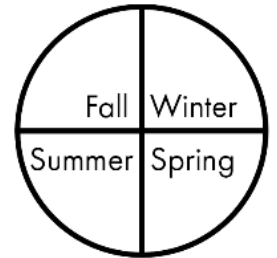

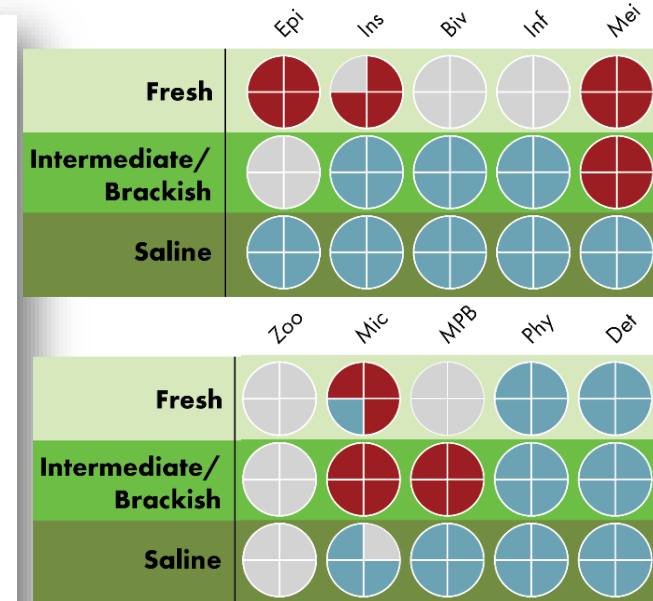

Summary of Existing Data and Data Gap Analysis

ERIN KISKADDON<sup>1</sup>, MELISSA M. BAUSTIAN<sup>1</sup>, SHAYE SABLE<sup>2</sup>, JAMES NELSON<sup>3</sup>, BETH STAUFFER<sup>3</sup>, CASSANDRA N. GLASPIE<sup>4</sup>, SIBEL BARGU<sup>4</sup>, MALINDA SUTOR<sup>4</sup>, MICHAEL J. POLITO<sup>4</sup>

<sup>1</sup>The Water Institute of the Gulf, <sup>2</sup>Dynamic Solutions, <sup>3</sup>University of Louisiana at Lafayette, <sup>4</sup>Louisiana State University

Produced for and funded by the National Oceanic and Atmospheric Administration (NOAA)

May 6, 2022

No Data  
 Data collected <2010  
 Data collected ≥2010

Significant data gaps were found  
(Kiskaddon et al., *in review*)

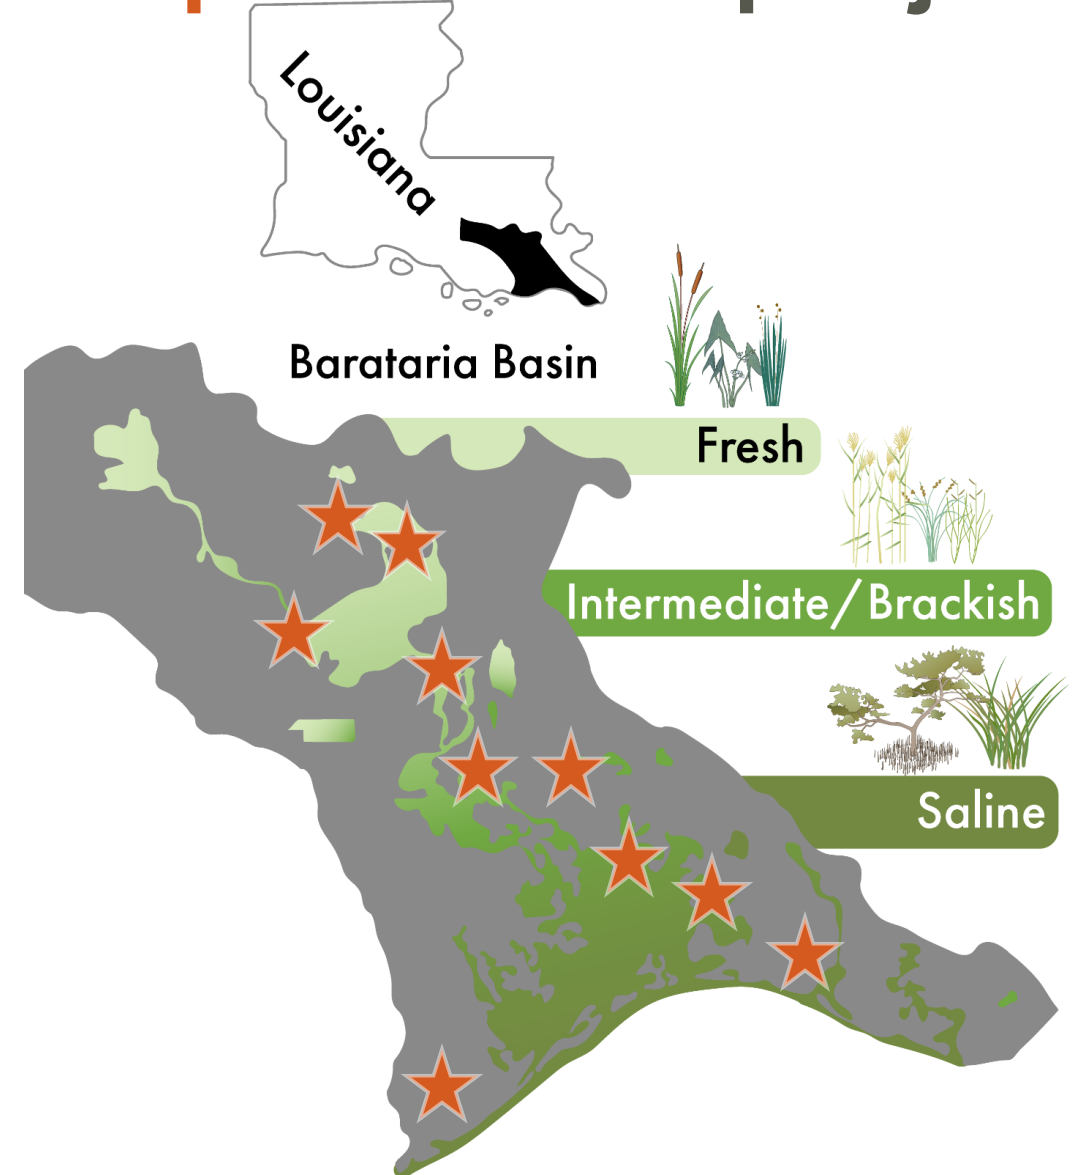

# Implementing the **lower trophic level** project

This project is expected to produce hundreds of datapoints collected across:

- The Barataria estuarine salinity gradient (10 stations from fresh to saline)
- All four seasons
- Three consecutive years (2025-2027)

This project links temporally and spatially with other ongoing monitoring effort to assess higher trophic consumers (nekton)

# Implementing the **lower trophic level** project

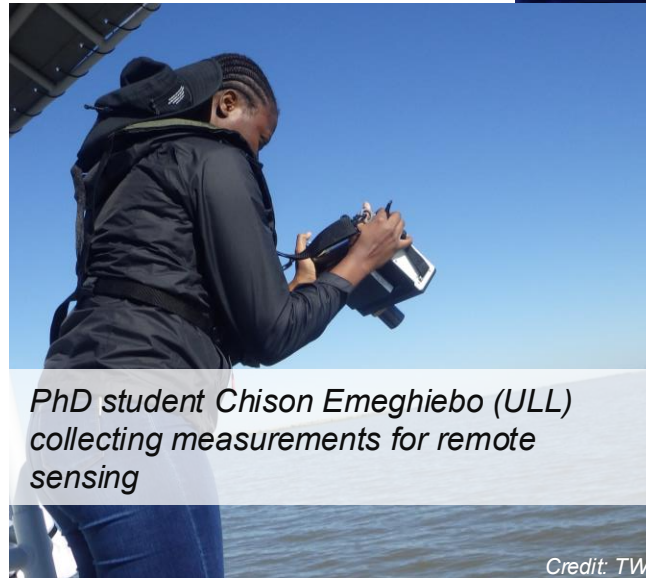

## Monthly Field Campaigns

- Phytoplankton biomass, community composition, and cyanobacteria
- Micro- and mesozooplankton density, biomass, and taxonomic composition
- Water column **nutrients** and suspended solids
- In-situ measurements for **remote sensing** data products
- **Environmental parameters** (water temperature, salinity, DO, etc.)

*Erin Kiskaddon and Emelia Marshall (TWI) collecting phytoplankton*

*Emelia Marshall (TWI) collecting mesozooplankton*

*PhD student Chison Emeghiebo (ULL) collecting measurements for remote sensing*

*Erin Kiskaddon and Emelia Marshall (TWI) rinsing a plankton net for mesozooplankton*

# Implementing the **lower trophic level** project

## Seasonal Field Campaigns

Same as monthly *PLUS* samples collected from wetland edge and open water habitats:

- Microphytobenthos biomass, cell density, and community composition
- Macroinfauna density, biomass, and community composition
- Sediment characteristics (grain size, bulk density, % organics)

> Gina Woods and MS student Kohinur Akter (LSU) collecting a sediment core in open water

# Implementing the **lower trophic level** project

*But wait, there's more!*

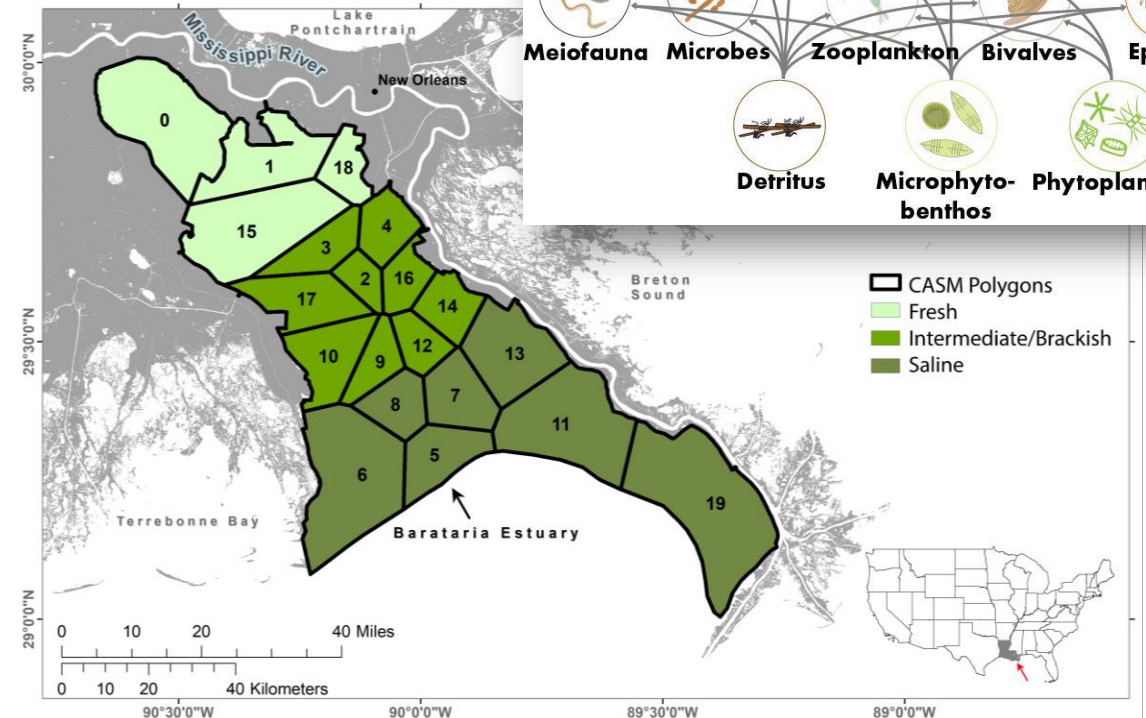

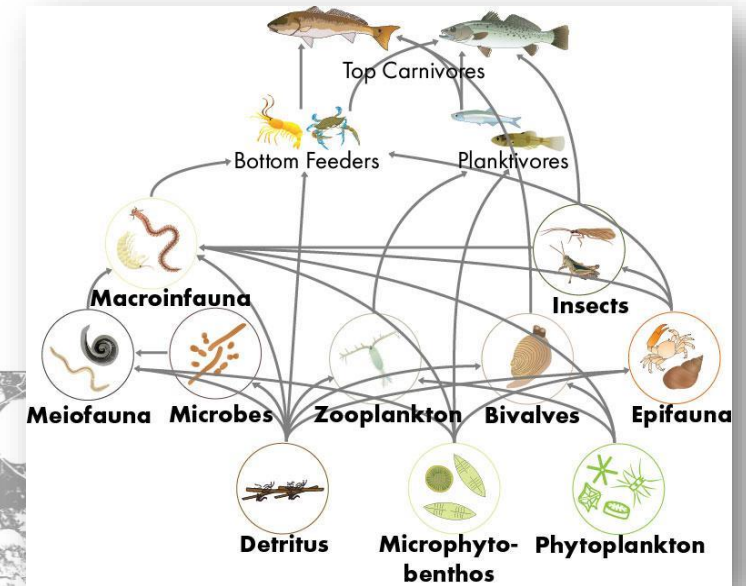

## Four Seasons of $\delta^{13}\text{C}$ , $\delta^{15}\text{N}$ , $\delta^{34}\text{S}$ , and %CNS

### Stable Isotope Data Collection

- Zooplankton & Phytoplankton/POM
- Microphytobenthos
- Macroinfauna
- Surface Sediment Organic Matter
- C3/C4 Vegetation, SAV, and Epiphytic Macroalgae

These data will be used to

- **Improve existing food web models**, including the Comprehensive Aquatic Systems Model (CASM)
- Inform ecosystem-wide restoration planning & evaluation

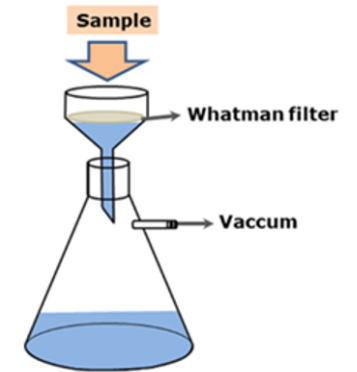

(Kiskaddon et al., *in review*)

# Implementing the **lower trophic level** project

A project of this magnitude and complexity requires special planning and coordination

9 project Principal Investigators  
spanning Academic, Non-Profit, and  
Federal organizations

Supported by the work of many  
technicians, graduate students,  
undergraduate students, and  
volunteers

Spring seasonal field effort team, April 2025. Left to right: Melissa Baustian (USGS), Emily Lain (USGS), Brenae Bergeron (USGS), Erin Kiskaddon (TWI), Emelia Marshall (TWI), Cassie Glaspie (LSU), Gina Woods (LSU)

# Challenges, Roadblocks, and Lessons Learned

## Land rights

- Locations of monitoring ultimately dictated by amenable landowners
- Working with private landowners is time consuming, but also essential and rewarding

## Logistics

- Planning successful field campaigns around dynamic Basin conditions is challenging
- Our first field events were test cases of timing and feasibility
- Navigated sample transfer for same-day processing with field teams located in remote areas
